

## Stop Lifting Servers The Old Fashioned Way

### Serious Gains:

- ✓ Reduce Installation Time By 75%
- ✓ Reduce Lost-Time Injuries
- ✓ One Tech Can Safely Complete Installs
- ✓ Rotates 360° In A 2-Tile Aisle

### ▶ RL 600S Easily Lifts 650 Pounds

Easily lift 650 lbs. with manual server lifter RL600S or get a RL600C customized for hot/cold rooms or PODs made to your specifications.

Safety Features include auto-locking hand winch that brakes instantly when handle is released. Safety straps fasten RackLift to cabinet and wheel brakes engage during lifts.

Vesatile feature set - Lift table inserts the load forward 23 inches into the cabinet. RackLift spins 360° in a 2-tile aisle for easy maneuverability.

Until RackLift™ came along the old way of doing things was to remove heavy components like power supplies and fans from devices to lighten the load for manual lifting by several technicians.

Once the device was mounted, these parts had to be painstakingly reinstalled. RackLift™ eliminates this unnecessary, time-consuming ritual by enabling one tech to install a fully assembled device from beginning to end in half the time that previously took multiple employees.
