

Dear RackLift™ Customer,

As part of our continued effort to ensure your RackLift™ is helping you safely and efficiently install valuable equipment, please find enclosed a RackLift™ Equipment Protection Kit. The kit includes three (3) pieces of rubber to insulate sensitive equipment from RackLift™ heavy duty steel components.

To install the kit, follow these steps. Installation should take no more than a couple minutes.

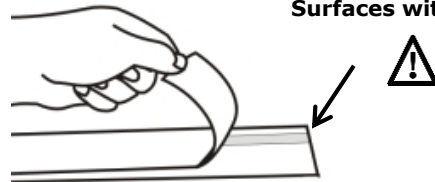

1. Use the enclosed alcohol wipes to completely clean the surfaces where the rubber will be affixed. Remove the plastic backing from the larger rubber piece taking care not to touch the adhesive. Affix the large rubber strip at the rear of the lift basket, covering the support brace and the exposed bolt that holds the pulley in place. Press firmly to ensure proper adhesion.
2. The smaller piece is to be placed on the front lip of the tray. Repeat the process to affix the small strip on the tray.

Clean Surfaces with alcohol

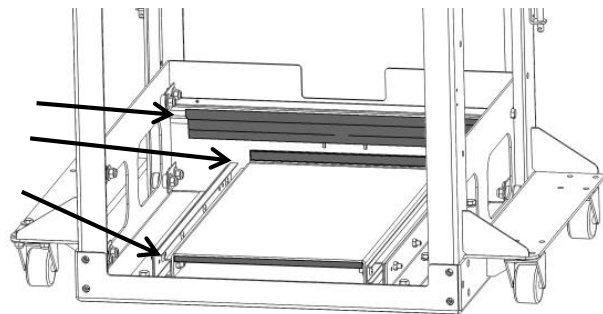

Remove Backing

Do not touch adhesive Surfaces with alcohol

Apply Rubber and Press to Secure

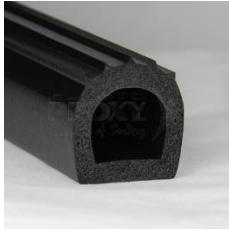

Your RackLift™ is now updated to better protect sensitive equipment from potential scuffs or scratches during transport and installation.

Thank you for your continued support and if you have any questions or concerns, do not hesitate to contact us at any time.
